

MATRIX BUTTONS™

TESTIMONIALS

"What a time saver. A superior rigid matrix in less time than an impression. Will not distort. The dental button simplifies making lab quality temps at the chair. What a great product. We wouldn't be without this one."
Joseph A Blaes, DDS St Louis, MO

"These buttons are just plain easy. I use them for single crowns and longer spans, with Luxatemp, Protemp and MatrixTemp; also from ADP. My assistant just uses a hot cup of microwaved water and we get plenty of working time. With cold water for air-spray, they turn opaque and rigid in seconds and they take up very little space, so I can easily save them, if needed."
Brian Gray, DMD Washington, DC

"I've been using buttons for over 10 years, because they are rigid, I get good margins: quick and easy-to-use. I have plenty of working time, using my everyday water bath. I use these in many of the courses I teach."
Bruce Crispin, DDS, MS Tarzana, CA

"This is a very innovative, accurate and simplistic product/technique that saves me more than 40% in time, with a simple learning curve.; a paradigm shift from traditional pre-op matrix impressions."
Frank Milnar, DDS, AAACD St Paul, MN

"These work well, and while I'm not sure I save a lot of time, compared the standard PVS technique, I know I save on overall cost. I have sufficient working time, and get a detailed matrix for the provisional. I recommend it."
Gregori Kurtzman, DDS, MAGD, FACD

"The thermoplastic Matrix Button is a material that can be used easily for single or, by combining multiple buttons, multiple crown and bridge provisionals. This is a low-cost, easy-to-use material that I can simply heat in a hot water bath or a ceramic coffee mug in the microwave while I wait on anesthesia." (excerpted from AGD Impact, March 2018)
Howard Glazer, DDS, FAGD Ft Lee, NJ

"A simple and very economical technique. We heat a cup of water with our "quick-hot" tap, and once we got the heating time right, we had plenty of working time, and got a good result with the temp materials I was already using. May not save me time, but they sure save money on materials. I can recommend these for single crowns and longer spans."
Troy Schmedding, DDS, AAACD Walnut Creek, CA

"Not only are these great, accurate, affordable for a temporary matrix.....we have found them to be the best and most economical way to fabricate morning aligners for our patients in Sleep Apnea appliances!"
Gary Radz, DDS Denver, CO

"These are so easy to use, with ample working time, and I am able to achieve good margins and occlusion with the provisionals made using this thermoplastic matrix system. I would recommend them to my colleagues
Ian Shuman, DDS, MAGD, AFAAID Pasadena, MD

"They're a great concept. A real time saver for the restorative dentist."
Terry Tanaka, DDS Chula Vista, CA
